2. Summary of duties

The post covers both business and systems analysis. The analyst engages with the business to understand its needs, engineer requirements and works with IT colleagues to deliver technology solutions. The analyst is responsible through the Development Life Cycle for ensuring that the business requirements are met and tracked, for refining the detailed systems requirements including data modelling, assisting with system testing, through to operational support.

Main Duties

- To analyse and document business processes and requirements and assess their efficiency and effectiveness in meeting overall University objectives.
- To analyse, propose and qualify the costs and benefits of process and system improvements in terms of staff, cash and other resources.
- To work with business relationship managers, project managers, architects, developers and testers to meet business requirements.
- To provide the refined detailed system requirements for the agreed IT solutions and support their implementation.
- To seek to improve existing systems and processes as part of continual improvement.
- To provide reports, both oral and written, on the above activities and work progress.
- To facilitate workshops and present to stakeholders at all levels of the business.
- To keep abreast of both business and IT developments within the University.
- To ensure that all work follows appropriate standards and conforms to agreed quality plans, and to identify improvements to standards and processes.
- To keep abreast of development in analysis methods and techniques.
- To coach, and, on occasion, supervise more junior or less experienced colleagues within your own area of specialist expertise.

3. Person specification

Requirements  (E = Essential/ D = Desirable)

<td>• Degree/equivalent professional qualification or demonstrable and proven track record in Business Analysis.</td>
</tr>
</tbody>
</table>

Knowledge, work and other relevant experience
### Essential:
- Recent practical experience of requirements analysis and detailed system specifications.
- Knowledge and experience of working on IT change projects.
- Experience of working with multiple Business partners to bring about systems or process change.
- Experience across the full SDLC.
- Proven knowledge of techniques for requirements definition and process analysis.
- Experience of facilitating workshops with high profile stakeholders.
- Broad knowledge of key IT capabilities and developments, and how they can be deployed for business advantage.
- Theory and practice of quality control across all deliverables in the software development lifecycle.

### Desirable:
- Experience of working in an agile development environment.
- Experience in logical data modelling.
- Experience of supporting operational applications.
- Recent practical experience of working with business users on business change projects in a medium/large organisation.
- Some experience of system testing.

### Personal abilities and qualities

#### Essential:
- Positive and proactive in adding value in all areas of work.
- Able to quickly understand business issues and problems and take a logical problem-solving approach to their resolution.
- Passionate about success.
- Influencing and negotiation skills to resolve conflicts between stakeholders at all levels of the organisation.
- Effective verbal and written communication.
- Flexibility and willingness to learn new skills.
- Desire to innovate and to try new approaches.
- Commercial awareness with the ability to prioritise, focussing on the value of all work.

### 4. Role specific requirements e.g. Shift working

N/A

### 5. About the unit/department

The Higher Education sector in England is undergoing dramatic change as institutions adjust to serious reductions in state funding for teaching and students must bear more of the cost of their education. As well as these cost drivers, the entry of more private providers to the sector and the increasing consumer power of high
fee-paying students will put a premium on service delivery and cost efficiency. In turn, this will throw emphasis on the development of robust, efficient, enterprise-scale IT systems to increase efficiency and customer choice.

Information Technology provides and supports all central University IT services and is responsible for the institution's Technical Infrastructure. In addition to this service and support provision, it develops systems to support the business requirements of the organisation.

6. How to obtain more information about the role or application process

If you would like to discuss this role before making an application, please contact

If you have any questions regarding the application process, please contact on 01908 655544 or email: Resourcing-Hub@open.ac.uk
