

“GOVERNING THE ANTHROPOCENE: CYBER-SYSTEMIC POSSIBILITIES?”

HERRENHAUSEN PALACE, HANNOVER GERMANY. 30TH - 31ST JULY 2015 - Programme for a Systemic Inquiry

Panel 1: **Learning about cybersystemic governance from Limits to Growth.**

Speakers: **Alexander Christakis** and **Heiner Benking**.
Response by **Robert Hoffman**

Input by Heiner Benking:

Revisiting, Reframing and Rescaling an embodied „Problematique“ and Covenant.

Reflections and Learnings about Systems, Models, Frames, Signs, Media,
Representations (like Scaffoldings), Boundaries, Scales, Languages and Mindsets

“GOVERNING THE ANTHROPOCENE: CYBER-SYSTEMIC POSSIBILITIES?”

LEIBNIZ: VISION ALS AUFGABE

THEORIA CUM PRAXI
WISSENSCHAFT ZWISCHEN
NEUGIERDE UND NUTZEN

Theoria cum praxi - Wissenschaft zwischen Neugierde und Nutzen II am 25. Juni 2015 [\[link\]](#)

A very special event about the Challenges around not just CHALLENGES to SCIENCE and POLITICS -see our 25th and 45th celebrations [\[link\]](#) - but how to include stakeholders, not observers and lobbyists.

The event is very interesting, I enjoyed talking not only to Gethmann and Labisch and recommend... will use much for Leibniz Castle Herrenhausen in July, Stay tuned...

Worldview Compositions and Cognitive Spaces

- a necessary evolutionary step

by Heiner Benking

Figure 1 HUMAN PERSPECTIVES

Subtitle of Fig 1: Although the perspectives of the world's people vary in space and time, every human concern falls somewhere on the space time graph. The majority of the world's people are concerned with matters that effect only family or friends over a short period of time.

Others look far ahead in time or over a large area - a city or a nation. Only few people have a perspective that extends far into the future.

*

Later we can read in the book: that in contrast to the majorities focus in the quadrant in the lower left “box”, the book concerns itself with the upper right quadrant or “box”.

Global Challenges for Humanity

- excerpt from [2011 State of the Future](#) -

Also available [15 Global Challenges-Spanish Translation](#).

*The 15 Global Challenges updated annually continue to be **the** best introduction by far to the key issues of the early 21st century.*

-- Michael Marien, editor, *Future Survey*

The 15 Global Challenges provide a framework to assess the global and local prospects for humanity. Their description, with a range of views and actions to address each, enriched with regional views and progress assessments are updated each year since 1996 and published in the annual [State of the Future](#). The short description of the challenges appears in the print version of the report, while a detailed, more complex one is on the CD that accompanies the report. The detailed version of the Global Challenges available in the CD's Chapter 1 are totaling over 1,300 pages. For each Challenge, there is a more comprehensive overview, alternative views or additional comments from participants on the overview, regional perspectives and relevant information from recent literature, a set of actions with a range of views from interviews with decisionmakers to address the challenge, additional actions and views on those actions, and suggested indicators to measure progress or lack thereof.

Title

Description

The
Predicament of
the Individual,
Communities,
and Humankind
in the 21st
Century

Delibertations about Structured
Dialogic Design, Systems
Thinking, Policy-Making, Multi-
track Diplomacy,
Empowerment and the
Wisdom of the People

Learnings and
Vistas based on
revisiting 40
years "Global
Problematique"

summing up 40 years
"Predicament of Mankind"
(Club of Rome early report),
look-outs, and new forms of
structured dialog and
deliberation / decision cultures
in an Interview with Alexander
Christakis.

Comparison of the Methodologies proposed to the Club of Rome in 1970

	Limits to Growth	Prospectus
Variables Considered	5	49
Participants	Experts	Representative Stakeholders
Method	System Dynamics	Successive committees of stakeholders
Club of Rome Decision	Accepted	Rejected
Positive Reaction since 1972	Club of Rome consistently employed System Dynamics as its method of choice Worldwide debate on topics such as climate change	Method envisaged in prospectus refined, resulting in Structured Dialogic Design, an effective method for dealing with complex psychosocial problems such as above 49
Negative Reaction since 1972	Rejection of results: by scientists on the basis of insufficient variety of studies by public for a variety of reasons	Structured Dialogic Design not widely recognized and with limited influence
Prognosis	Continuing dissent and change occurring usually because of catastrophic events	Gradual adoption of structured dialogue and eventual consensus on controversial issues

Global Sharing and Coping

Starting Points uia.org site - some slides...

I could have also called this UIA guest page **GLOBAL CHANGE** or **LOCAL AND GLOBAL CHANGE** - as my work started about global environmental issues in 1988 with such wide and universal themes. Only because I was involved in two or more projects at that time, and have a certain background which was about preparing and documenting decisions and presenting results, I was able to make the bridge, combine what normally is not seen as one - or in one solution. As both project concepts are not only of wider interest and unique in their approach, specially in their time we are proposing here to follow each background independently and then join in again the flow of events.

HARMONIZATION

The first and most central entry points have been around a G7 and SRU German Environmental experts initiative which was taken up by the UN-Environment Programme UNEP - HEM.

GLOBAL CHANGE

The other started with the GLOBAL CHANGE conference 1988 in Moskow.

Germany and other countries had been invited to present „Challenges to Science and Politics“ in form of Conferences and Exhibitions. As I was invited to contribute I had to think anew on how such complex Issues could be communicated to the broader public, raising awareness and consciousness, and being correct and helpful for scientists, politicians, and industry at the same time. I go public now 1998 as after having this touring exhibition 8 years in Germany, but never been shown outside Germany, and being updated and in high demand, there is high danger of losing this piece and milestone. Politics look east and local when the exhibition was opened in May 1990. The result we have no public eye and information about the exhibition, its scope and results. As this is fatal in my view, I fee I have to change and address that.

Das System Erde

Lokale und globale Veränderungen

Globale Veränderungen haben ihren Ursprung in lokalen Prozessen. Ohne die Sicht des Details ist das Verständnis großskaliger Vorgänge nicht möglich. Dies jedoch hat ein gewaltiges Anwachsen der Datenflut zur Folge, deren Beherrschung und Verständnis immer schwieriger wird. Moderne Verfahren der Datenverarbeitung und der Kommunikationstechnik bieten Ansätze, dieser Datenflut Herr zu werden.

Diese Verfahren und das dazugehörige Instrumentarium machen es möglich, Daten auf unterschiedlichsten Raumskalen und für lange Zeitreihen rasch abzurufen und zu verarbeiten. Nur so wird eine Gesamtsicht der Strukturen und Prozesse im Raum-Zeitgeflecht möglich. Um diese Verfahren weltweit abzugleichen und verfügbar zu machen, werden im Rahmen des Umweltprogramms der Vereinten Nationen (UNEP-HEM) in München Dokumentationen erstellt und Empfehlungen zur Vorgehensweise und zur Harmonisierung von Maßnahmen und Systemen entwickelt.

Objektive und präzise Gesamtsicht der Naturraumentwicklung

“GOVERNING THE ANTHROPOCENE: CYBER-SYSTEMIC POSSIBILITIES?”

HERRENHAUSEN PALACE, HANNOVER GERMANY. 30TH - 31ST JULY 2015 - Programme for a Systemic Inquiry

Das System Erde

Idiomatische und zeitliche Strukturen:

Die Finanzwirtschaft ist ein Teil der Wirtschaftswissenschaften. Sie befasst sich mit der Geldbewegung in der Wirtschaft. Die Finanzwirtschaft ist ein Teil der Wirtschaftswissenschaften. Sie befasst sich mit der Geldbewegung in der Wirtschaft. Die Finanzwirtschaft ist ein Teil der Wirtschaftswissenschaften. Sie befasst sich mit der Geldbewegung in der Wirtschaft.

Im Bereich der Geographie tritt neben der Raum- und Zeitstruktur auch eine dritte Größe, die Komplexität, auf dem Landschaftsbild zutage und stellt ein dreidimensionales System dar. Damit wird bei der Beschäftigung mit Geographischen Prozessbegriffen immer wichtiger die betriebswirtschaftliche in der Geographie durch den Prozessbegriff der Dinge zu ersetzen.

Pointers to possibilities: Ekistics, Dymaxion World and Eco-Cube

Year: 2010

Patterns Essential to Individual and Global Health? (Part #8)

[Parts: [First](#) | [Prev](#) | [Next](#) | [Last](#) | [All](#)] [Links: [To-K](#) | [From-K](#) | [From-Kx](#)]

The metaphor offered by Rubik's Cube was used by Heiner Benking to develop a "Rubik's Cube of Ecology" in 1990 (as part of the [Global Change](#) touring exhibition) as a means of explaining the nature of integration and of developing a framework for co-ordination and harmonisation across various fields, areas, regions, disciplines and domains (*Visual Access Strategies for Multi-Dimensional Objects and Issues*, 1993). It was designed to offer a new world view, using a hyperlinked Eco-Cube, for better understanding and communication about multi-disciplines like ecology.

Views of the Eco-Cube

The Eco-Cube is reminiscent of the Ekistics Grid developed by C.A. Doxiadis as a framework for organizing information relevant to [ekistics](#) as the science of human settlements. This has been used to further develop ekistic concepts, and also in the application to practical problems. Such a grid display any component within two dimensions at a point of intersection of abscissa and ordinate. The abscissa of ekistic units remained constant in all uses of the ekistic grid, and the most usual ordinate consisted of the five ekistic elements: Nature, Anthropos (Man), Society, Shells (dwellings or buildings), and Networks, with a sixth line denoting their Synthesis.

There is also an affinity in such approaches with that of R. Buckminster Fuller in his concern with global use of resources and energy -- reflected to a significant degree in his polyhedral *Dymaxion Map*, its animations and his underlying philosophy, as discussed elsewhere (*Geometry of Thinking for Sustainable Global Governance: cognitive implication of synergetics*, 2009; *Geometry, Topology and Dynamics of Identity: cognitive implication in fundamental strategic questions and dilemmas*, 2009).

It is appropriate to note that *Windows* offers a 2D picture puzzle that resembles Benking's original inspiration from Rubik's Cube (*How to Play with Puzzles in Windows Vista*). Other such picture puzzles are widely available on the web, notably allowing users to substitute their own pictures.

Such initiatives with respect to the environment raise the question as to whether equivalents might be developed with respect to individual health -- and its relationship to any environment through lifestyle diseases. The latter are implicitly of concern in the comprehensive approach to settlement design -- notably as subtly explored by environmental architect Christopher Alexander in his concern with contexts offering qualities where it was "good place to be" (*A Pattern Language*, 1977; *The Timeless Way of Building*, 1979).

WORLD KNOWLEDGE II & The Learned Berlin (200 & 300 years ago) and now ?

See also WORLD KNOWLEDGE I above: [\[link\]](#)

desperate ! - We have celebrated in Berlin for the whole year "WeltWissen" - World Knowledge - but it looks like we have missed a person who is in the center of the picture of the "Learned Berlin" - Das gelehrte Berlin. His name? CARL RITTER [CARL RITTER - \[link\]](#) - he even had his 150 years celebration of his passing away, when even the kings coach was accompanying him to his grave. I know, difficult times, but you might know some of the names on the picture around him: Alexander v.H. and his brother Wilhelm von Humboldt, Hegel, Schleiermacher, Hufeland, Neander. [\[link\]](#)

You will not be surprised to find von Humboldt and Hegel, and might know the others, but who the heck is in the center ?? and how come he is not centerpiece in this years celebration when he had similar reputation and was over decades teaching at the Humboldt University, the war academy and academy of sciences?

A COGNITIVE SPACE

A general diagram of mankind's place in the global ecosystem using a VENN diagram subdivided as proposed by E. EDWARDS (1989)

A: Atmosphere, G: Geosphere H: Hydrosphere E: Energy

The intersections represent specific fields of inquiry. EH is for example hydrodynamics. Any subset can be subdivided according to more particular necessity ($A \dots A_1, A_2 \dots A_n$) Mankind and smaller human groups interact with any environmental subset. EHAG represents the most global dynamic and integrated ecosystem. Different and much more complex representations are possible as for example DOXIADIS' ekistics or BENKING's eco-cube.

0479

COGNITIVE PANORAMA ¹⁾²⁾

A conceptual superstructure that defines and identifies topics as logical places, displays relations and connections within these topics or issues"

This concept has been introduced by H. BENKING. The following comments are Benking's explanations, plucked from a series of papers and lectures (see bibliography)

"The cognitive panorama is a metaparadigm to counteract cyberculture's anticipated impact due to its: 1) open-ended universality, 2) loss of meaning 3) loss of context"

It is now obvious that we risk drowning in an ocean of incoherent data which could lead us to total conceptual anarchy.

According to Benking, the proposed cognitive panorama "allows us to embody and map concepts in their context and develop common frames of reference".

Such a conceptual superstructure "helps us to locate and become aware of: 1) what we know or miss, 2) where we are and what we think, 3) where we miss, underuse or manipulate information. By avoiding a "flat" chaotic mess of data which leads to the known "lost-in space" syndrome, we actually define cognitive spaces.

Through reflection on conceptual positions, outlining and embodying situations or topics (logical places or containers) we can follow meaning into embodied context and semantic spaces, and also scrutinize abstract "realities" by exploring participatory and collaborative approaches.

→ Conceptual navigation; Convertibility of meanings; Ecocube; Harmonization; Knowledge map; Underconceptualization

OCEAN SUSTAINABILITY SCIENCE SYMPOSIUM

4 Mar 2015 @ 15:37

The Symposium in Kiel is a gathering of scientists and practitioners concerned with sustainable ocean development. 150 participants from 24 countries and with a wide array of backgrounds, unique in variety in such a broad "subject area" - See SIGs vs, GIGs in the "side bar". Early career scientists and established experts from a broad range of disciplines, policy, academia, administrations, exchange their views on: Ocean sustainability, ocean

VERTICAL MUSSEL REEF FARMING MARINE OASES WITH ECONOMIC AND ECOLOGIC SIGNIFICANCE

PURPOSE & CONTEXT

Sustainability is a vital necessity for all species, but it could be achieved only after we have recovered seabed biocoenoses damaged by eutrophication. The first case study of our project is the Black Sea, it is an inner marine basin, connected to the world ocean through the straits of Bosphorus and Dardanelles. Due to intensive industrial, agricultural or civil activity its coastal zones suffer from eutrophication. As a consequence the phytoplankton biomass increases uncontrollably, leading to hypoxia or anoxia, and followed by the formation of large dead zones. This process has reached colossal proportions in the Black Sea and other similar basins (North, Baltic and Adriatic Seas) and threatens not only the flora and fauna of sea and land, as well as human health and safety.

WHY MUSSEL REEFS?

The blue mussel has an important role in marine food chains that makes it potentially a strategic ally in the effort to remedy damaged ecosystems. It is an important filter feeder and consumes nutrients and micro-algae from the water - 160 000 l per day. Mussel larvae have good self-attachment and thrive best on vertical surfaces that provide them with good access to food and safety from benthic predators. Their shells additionally expand the reef's surface for numerous epibiotic creatures. Their larva phase has an important trophodynamic role, as it is food for the young of many fish species. Thus, their presence attracts various other species leading to an overall ecosystem boost. We believe that man and nature should work in symbiosis, expressed in synergistic economic, social, geopolitical, food and feed, climatic and ecological benefits. We have shifted the perspective by looking at the challenges of eutrophication as a valuable resource and an opportunity for elegant solutions and an abundant and sustainable future.

ECOLOGICAL BENEFITS

- recover bottom communities - gives them access to more favorable upper layers.
- restore marine food chain, the mussel consumes phytoplankton, organisms higher in the food chain.
- provide habitats and breeding sites diverse in temperature, salinity, pressure and luminosity.
- filter a wider range of water layers while more existing artificial reefs and mussel farms.
- restore light transmission of the water column, thus restoring macro-algae and their communities.
- provide shelter from creeping predators (i.e. starfish, sea urchins, etc.) to numerous benthic and pelagic species.
- enrich the biotope with larvae - a million times more than the number of adult reef inhabitants.

MUSSEL FARMING

Vertical Mussel Reef is an innovative aquaculture technology, which expands the aquaculture suitable for marine farming as it can be applied at open sea up to depths of 100m. The reef structure is essentially a welded polymer grid forming concentric cylinders, with a diameter of up to 5.5m and height of up to 12.5m with the anchoring. It covers a total surface of about 300m². The entire structure is submerged and anchored to the bottom at depth larger than 10m, so its top is located at least 4.5m below the surface. Essentially, the reef is a rigid structure, which allows for stable and even attachment of mussels. The densely folded framework increases the effectiveness of the structure as a reef. Another crucial characteristic of the design is that it covers multiple layers of the sea.

SOCIO-ECONOMIC OPPORTUNITIES

- create opportunities for aquaculture development in close and open sea, boosting directly and indirectly blue growth.
- recovery of fisheries and employment: foster natural income by restoration of fish populations by counteracting overfishing, bottom trawling and other unsustainable fishing methods and by providing income and security for breeding, growth and feeding suitable for young and adult fish.
- increased food security - with extensive protein production in the marine environment, which is less dependent on atmospheric factors.
- counteracts climate change by intercepting CO₂ in the carbonate shells.
- reduces acidification of marine waters, which protects other carbonate shell species, more sensitive to acidification (i.e. corals, crabs, intertidal zone, etc.).
- positive effect on coastal and marine tourism by improving coastal water clarity and quality.

KnowMap

Vol. 1, No. 5, August 2001

People feel fine with icons (images) and symbols, but when Peirce in his sign theory introduced something *in-between* what he called *index* they are somehow destabilized and frightened - not able to believe in the *either - or* world of words or metaphoric pictures.

Just for the exercise we want to test Peirce's *index* here by considering his third category a spacial map or model. This would create room for communication and sensations when linking and merging of realities and bridge the *media breaks*. This *in-betweening* is further explored in ...

Breaking Down New Walls

10th Annual Summit of Nobel Peace Laureates, Berlin, November, 9-11 2009

Whoever imagines mental
deep permeable barriers

which actually do not exist
and then thinks them away,
has understood the world.

As space is entrapped
in geometry's network of lines,
thought is caught in its (own) inherent laws.

Maps make the world comprehensible to us;
we are still waiting for
the star-maps of the spirit.
In the same way than ambling through fields
we risk getting lost,
the spirit negotiates its terrain.

Friedrich Rückert,

Wisdom of the Brahmins, a didactic poem,

Charles T. Brooks in 1882 – above is unfortunately only a clumsy first translation by

Robinson/Benking

as we could only get hold of the original German version.

this is a critical translation issue:

WALLS & BOUNDARIES are „man-made“ – They have no equivalent in Nature. The term Schranken therefore can be translated as restraining bounds, or semiphors, barriers & temporary permeable or translucent / transparent material/strata/membranes/transition zones).

Interview, Panel-Discussion,

Friedrich Rückert
Die Weisheit des Brahmanen,
ein Lehrgedicht in Bruchstücken
Werke, Band 2, Leipzig und Wien
[1897], S. 50-51.

Guilford, J. P., The Nature of Human Intelligence, New York: McGraw Hill, 1967. Structure of Intellect. [175] Cf. the work of Heiner Benking. To be published in 9.

Augmented knowledge in the book by Kim Veltman: **Augmented Books, Knowledge, and Culture**

http://www.isoc.org/inet2000/cdproceedings/6d/6d_1.htm

These quests to master new knowledge owe much to systems theory, "chaos theory" (a seemingly contradictory combination of terms), complexity, [77] and developments in neural networks, whereby systematic treatments of apparently random forms bring unexpected patterns of order.

What makes these trends the more significant is that thinkers concerned with the systematization of intellect, such as Guilford, have intuitively sought to link units, classes, relations, systems, etc. with products and operations (figure 12).

Roundtable learning from experience during the last 40 years and new ideas

Stumbling blocks preventing true dialog, peace-making, and reconciliation:

- 1) we fight over words but do not check the meaning,
- 2) we do not question and compare the values attached to statements and attitudes,
- 3) we do not contextualize and embody concepts and meaning, do not check the sectors, regions, scales, proportions and consequences of alternative actions,
- 4) we do not give voice, empower, listen, cherish and cultivate difference or variety in dialog and decision making,
- 5) Disorientation and dumbing-down in Cyberculture and a mis-administered and misunderstood, intangible “[Globalisation / Glocalisation](#)”: Where we get overloaded by communication noise (sign/symbol melange) and media demagoguery which means: no trust and fidelity in the statements and no ways and means to check the credibility and impact/relevance, and get lost between the scales, brackets, and sectors.
- 6) The above incompatibility and incomparability opens the door for over-claims and oversimplifications. Leaders use intangible jargon (plastic-words), neglect impacts and avoid instead of exploring differences and alternatives.

LET's TRY TO LEARN AND EXPERIENCE MORE,

LET's GO BEYOND

WALLS AND MODELS

Searching for alternatives
for knowing, presenting,
representing, and sharing?

Plan „B“ has a flaw

Why not go for PLAN „D“?
([overview](#) & [overclaims](#))

The European CEC „white paper“ Towards a Learning Society started with Condorcet asking us to experience and even try new ways. The Club of Rome Report quotes the children with „get real or get lost“. Children workshops showed in 1993 that they picked the proposed concepts up very naturally and easily, they wrote as a headline „[our View of Life is too Flat](#)“. All cultures request to make words solid and use a living, embodied language with analogies and metaphors.

We recommend these links to show that „big pictures“ and „other models“ are possible and the work-reports and material on education including „[10 Theses for Education](#)“ from Turku, WFSF 1993 [GERMAN](#) „big pictures“ have been also asked here 9 years later „[THINK GLOBAL - but how?](#)“ And can be also found here: [CAFE WELTGEIST](#)
